

OEM 750 Series

Compact, Low-Cost Drives

With technology enhancements and field experience, Compumotor offers the OEM750 Series, a compact microstepping drive that provides big performance in a small package.

Electronic Damping

All step motors are subject to mid-range instability, also referred to as parametric oscillations. Several problems are associated with these oscillations. They can cause the motor to stall, and thus cause the user to include a margin (typically at least 50%) of extra torque to overcome the oscillation. The OEM750 Series incorporates a subset of the patented electronic damping circuitry developed by Compumotor. This feature suppresses these oscillations, allowing the torque formerly reserved for safety margin to be used to do useful work, thus taking advantage of the full capabilities of the step motor.

- Minimizes stall condition
- Increases usable torque
- Higher accelerations

Current Loop Adjustment

Since the OEM750 Series is capable of operating from 24 to 75 VDC, while operating motors with a wide range of winding inductances, Compumotor incorporated current loop gain techniques to optimize motor performance. The loop gain adjustment is designed to maximize your system's (drive, motor, and voltage) performance. Control over the current loop gain allows customers to take advantage of the motor's capable torque and reduces audible noise and excessive heating of the motor. This gives users more choices when selecting a motor and the opportunity to pick the best motor for their application.

- Optimizes motor performance
- Reduces audible noise
- Reduces motor heating

Packaging

The OEM750 Series combines ASIC and surface mount technologies to minimize the product's footprint, minimize overall package size, and increase product reliability.

Reliability

At Compumotor, producing reliable, quality products is our number one priority. Our OEM750 Series is designed with high-quality standards and manufactured with state-of-the-art equipment and production methods. Before any product reaches our customers, it must pass a rigorous set of hardware and software tests. Today, Compumotor uses Highly Accelerated Life Testing (HALT) to uncover the product's vulnerabilities, in order to produce a robust and reliable product. JIT (Just-In-Time) manufacturing and DFM (Design-For-Manufacturability) methods lend themselves well in creating the necessary flexibility to readily accommodate your special needs.

See the OEM Servo Drive Products in the Servo Drive and Drive/Controller section.

Quality Products Designed and Priced for OEMs and High-Volume Users. Call 1-800-358-9070.

OEM 750

Compact, Low-Cost Drives

Compumotor's OEM750 microstepping drive is designed with performance, power, packaging, and reliability in mind — everything that is necessary to meet your high-volume microstepping application needs.

Features

Performance

- Designed for use with motor inductance range of 0.2 mH–80 mH
- Three-state current control allows the drive and motor to run cooler and more efficiently than two-state drives
- Selectable resolution up to 50,800 steps/rev
- Auto standby reduces motor current (and heating) at rest
- Provides 0.2 Amps to 7.5 Amps (peak)
- Single 24-75 VDC power supply input
- Compatible with a variety of motors
- Six predefined current waveforms to optimize smoothness

Protection

- Optically isolated step and direction inputs
- Short circuit protected—phase-to-phase, and phase-to-ground
- Power dump circuitry to protect drive from regeneration caused by large inertial loads
- Self-test feature to verify proper system operation
- Overtemperature circuitry protects the drive from thermal damage

Physical

- Status/fault LED indicators to confirm proper operation
- ASIC and surface-mount technologies minimize product footprint, overall package size, and increase product reliability
- Removable snap-on molded cover for convenient configuration and protection against contaminants
- Optically isolated fault output for embedded applications
- Heat plate design allows thermal dissipation through a suitable heat dissipating mounting surface
- Simplified, two-screw mounting
- Right-angle screw terminal allows side-to-side mounting or Eurorack compatibility
- Built-in controller version for complete application solutions—OEM750X
- Overall dimensions 5.0 x 3.6 x 1.6 in. (127 x 91 x 41 mm)
- Convenient configuration DIP switches
- Certified as UL-recognized component
- CE (LVD & EMC)*

* For compliance, user must follow procedure set in the OEM750 User Guide.

OEM750 Specifications

	Parameter	Value	
Power Input	DC	24–75 VDC @ 2.0 Arms (motor dependent)	
	Performance		
	Accuracy	±5 arc min (0.0833°) typical. Unloaded-bidirectional with Compumotor supplied motors. Other motors may exhibit different absolute accuracy. ±1 arc min (0.0167°) typical/per each frictional load equal to 1% rated torque. Loaded-in addition to unloaded accuracy.	
	Repeatability	±5 arc sec (0.0014°) typical. Unloaded-one revolution returning to start point from same direction.	
	Hysteresis	Less than 2 arc min (0.0334°) unloaded-bidirectional.	
	Resolution	16 selectable choices: 200, 400, 1000, 2000, 5000, 10000, 12800, 18000, 20000, 21600, 25000, 25400, 25600, 36000, 50000, 50800	
	Waveform	Selectable. Allows waveform shaping for optimum smoothness or relative accuracy. Pure sine: -4%, -6%, -8%, -10% 3rd harmonic.	
Amplifier	Type	20 kHz fixed frequency, variable duty cycle pulse width modulated (PWM) Current Controlled, bipolar chopper	
	Number of Phases	2	
	Output Current	0.2–7.5 amps current per phase peak (selectable)	
	Drive Supply Voltage	24–75 VDC (dependent on external power supply)	
	Standby Current Reduction	25%, 50%, or 75% of selected motor current	
	Nominal Chopping Frequency	20 kHz	
	Max Stepping Rate	2 MHz max pulse rate: 50 rps max speed	
	Step Input	High-going pulse, 200 nsec min width; max pulse rate is 2 MHz; User-supplied driver for the step and direction inputs should be capable of providing a minimum of 6.5 mA to maximum of 15 mA	
	Direction Input	Logic High = positive (CW) rotation—3.5–5.0V Logic Low = negative (CCW) rotation—0–0.4V User-supplied driver for the step and direction inputs should be capable of providing a minimum of 6.5 mA to a maximum of 15 mA. The direction input must be stable for at least 200 µsec before the drive receives the first pulse	
	Fault Output	Open-Collector/Emitter, Vce = 70 VDC, Vce sat = 0.3 VDC, Ic = 10 mA (max) Maximum dissipation = 55 mW Conducting = normal operation Non conduction = drive fault	
	Protective Circuits	Short Circuit*	Phase-to-phase, phase-to-ground
		Undervoltage	If DC supply drops below 24 VDC
		Overtemperature*	The drive will fault if heat plate exceeds 55°C
Environmental	Drive Temp	Max allowable ambient temperature is 122°F (50°C). Fan cooling may be required if airflow is restricted. Max allowable heatplate temperature is 55°C.	
	Humidity	0 to 95%, Non-condensing	
Physical	Drive Dimensions	5.0 x 3.6 x 1.6 in (127 x 91 x 41 mm)	
	Weight	12 oz	
Motor	Type	Two-phase hybrid permanent magnet, 1.8°	
	Number of Leads	4, 6, or 8	
	Inductance Range	0.2 mH–80 mH	

* Drive shuts down in conditions listed. Power must be cycled or drive reset to resume operations.

OEM 750X

Compact, Low-Cost Microstepping Drives with Integrated Controller

Compumotor's OEM750X microstepping drive/controller combines the power, performance, packaging, and reliability of the OEM750 with the simple programmability of a built-in, RS-232C based controller. The "X" version is a cost-effective, single-axis control system to meet your high-volume application needs.

Features

Performance

All of the high performance found in the OEM750 plus:

- Built-in stand-alone controller

I/O

- Standard RS-232C serial communications interface
- Incremental encoder support for position tracking, stall detection, and position maintenance
- Three sequence select inputs for program initiation by an external device
- End of Travel and Home inputs

Language

- Simple Compumotor X Language
- Optional 2K bytes of battery-backed RAM to store up to 7 command sequences (-M2 option)
- Address selectable for daisy chaining up to 8 units

Protection

- Short circuit protected—phase-to-phase, and phase-to-ground
- Status/fault LED indicators to confirm proper operation

Protection (continued)

- Power dump circuitry to protect drive from regeneration caused by large inertial loads
- Self-test feature to verify proper system operation
- Overtemperature circuitry protects the drive from thermal damage
- Certified as UL-recognized component
- CE marked with LVD compliance

Physical

- ASIC and surface-mount technology minimize product footprint, overall package size, and increase product reliability
- Removable snap-on molded cover for convenient configuration and protection against contaminants
- Optically isolated fault output for imbedded applications
- Heat plate design allows thermal dissipation through a suitable heat dissipating mounting surface
- Simplified, two-screw mounting
- Right-angle screw terminal allows side-to-side mounting, or Eurorack compatibility
- Overall dimensions 5.0 x 3.6 x 1.6 in. (127 x 91 x 41 mm)
- Convenient configuration DIP switches

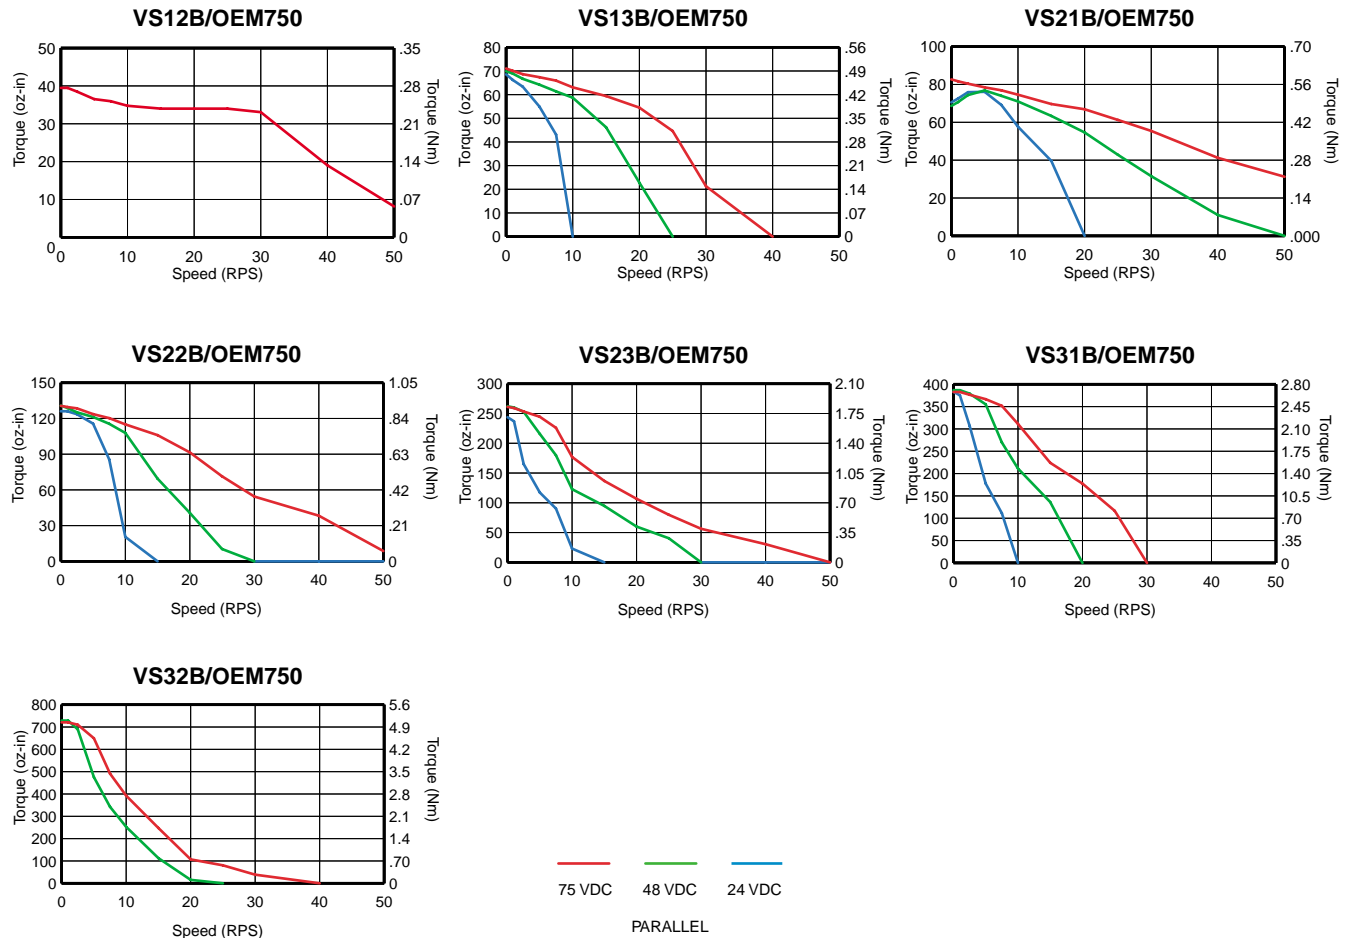

OEM750X Specifications

Parameter	Value
Power Input	DC 24–75 VDC @ 2.0 Arms (motor dependent)
Performance	<p>Accuracy ±5 arc min (0.0833°) typical. Unloaded-bidirectional with Compumotor supplied motors. Other motors may exhibit different absolute accuracy. ±1 arc min (0.0167°) typical. Loaded-in addition to unloaded accuracy, per each frictional load equal to 1% rated torque.</p> <p>Repeatability ±5 arc sec (0.0014°) typical. Unloaded-one revolution returning to start point from same direction.</p> <p>Hysteresis Less than 2 arc min (0.0334°) unloaded-bidirectional.</p> <p>Resolution 16 selectable choices: 200, 400, 1000, 2000, 5000, 10000, 12800, 18000, 20000, 21600, 25000, 25400, 25600, 36000, 50000, 50800</p> <p>Waveform Selectable.
